

BuildingReports® announces new field service application and web-based solutions for HVAC industry at 2017 AHR EXPO®

Leader in mobile compliance inspection and web-based reporting software expands beyond fire and life safety to deliver increased efficiency and service visibility for HVAC industry.

January 30, 2017 (ATLANTA) – Atlanta-based BuildingReports will unveil the latest addition to its ScanSeries® suite of mobile applications for Android™ and iOS®. After security, the expansion represents only the second time that the industry leader in fire and life safety compliance reporting has expanded to provide solutions for other facility service functions.

The new HVACScan™ application and software-as-a-service solution offers heating, ventilation, air conditioning, and refrigeration service providers a competitive advantage in securing new contracts and generating more recurring revenue. Through a simple barcoding point-and-scan process, HVAC technicians can quickly and easily provide verifiable electronic documentation for commercial and industrial systems and devices. The solution includes features and functionality specific to both mechanical and electrical HVAC contractors.

“Because all service reporting, warranty and recall information, photographic documentation, and maintenance detail is available online instead of within a binder or filing cabinet, facility management companies and professionals have immediate access — 24/7 — to all service and system records,” said Jason Kronz, BuildingReports’ president and chief technology officer.

In addition to having many of the same features and benefits as other popular ScanSeries® applications, Kronz announced the addition of new features based on the feedback service companies contributed during the design phase.

“HVACScan’s interactive FloorPlan feature even allows service companies to diagram and plot the location of all connected devices in a facility’s system, creating a more efficient and value-added service delivery model. This means third-party service technicians and facility maintenance professionals can easily locate a specific device in the event of a failure or scheduled service,” said Kronz.

“We’ve also included an advanced parent-child relationship for equipment comprised of multiple individual devices. This feature provides in-depth reporting on all devices that make-up a HVAC system.”

BuildingReports’ employees and executives will be demonstrating the new solution at the 2017 AHR EXPO® at the Las Vegas Convention Center from January 30 to February 1, 2017. Those interested in a demo should visit booth N11626 located in the Software in the North Hall. The solution will be accepting a limited number of beta users. Once the beta period is complete, the software will be licensed as either a stand-alone solution or as part of the larger ScanSeries® suite of applications for fire alarm and signaling, water-based fire sprinklers, fire suppression, life safety and security systems.

About BuildingReports

Building safety compliance is critical to service companies, building owners and fire and, safety officials who are charged with safeguarding occupants. BuildingReports’ mobile and online inspection reporting tools enable inspectors to gather data on fire and life safety devices quickly to ensure that they are working properly and meet code requirements or to identify actions needed to meet compliance through easily verifiable inspection reports. With more than 3.3 million inspection reports to date, 600,000 buildings represented and over 800 inspection companies in its network, BuildingReports has earned its reputation as the trusted name in compliance reporting.
