Take advantage of SWEP's individual packaging option

LANDSKRONA, Sweden, January 1, 2017 – SWEP now provides customers with the option to have BPHEs (brazed plate heat exchangers), insulation, and any other accessories individually packed at their request.

This option was implemented due to increased demand for individually packed goods from both US & European patrons. Customers can choose to have BPHEs plus accessories packed per box depending on size and space available. Boxes can be provided with or without the SWEP logotype depending on what best suits the client's wishes. Each box contains a label which identifies the SWEP items packed inside each box as well as any customer specific part numbers tied to the packed items.

This option is currently available from SWEP's central warehouses located in Germany and Oklahoma, USA. SWEP is also currently working to have this option rolled out in our warehouse in India in the near future.

SWEP's ambition with the individual packaging concept is to create value for our customers by extending our packaging offer in order to meet the growing market demand.

About SWEP

SWEP is the world’s leading supplier of compact brazed plate heat exchangers (BPHEs). These products are used where heat needs to be transferred efficiently in air conditioning, refrigeration, heating, and industrial applications. SWEP is close to its customers, with representation in more than 50 countries and its own dedicated sales force in more than 20 countries. Highly efficient production units in Sweden, Switzerland, the USA, Malaysia, Slovakia and China enable SWEP to serve customers all over the world. SWEP is part of the global Dover Corporation, which is a multi-billion-dollar, NYSE-traded, diversified manufacturer of a wide range of proprietary products and components for industrial and commercial use.

About brazed plate heat exchangers

A brazed plate heat exchanger consists of corrugated plates, combined to create complex channels through which a hot medium and a cold medium can be distributed. The media flow in separate circuits but come into close proximity, allowing heat to be transferred from one to the other with very high efficiency. The number, type, and configuration of the cover plates can be varied to achieve the required thermal properties.

SWEP’s BPHEs are now AHRI certified!

If you are looking for the additional security of third-party verified performance, the SWEP A range is the choice. As the first brazed plate heat exchangers to be certified by AHRI (the Air-Conditioning, Heating, and Refrigeration Institute), they are well suited for HVAC, district heating, and district cooling applications.
